Our success factors

Development, Production & Sales

The complete range of motors, fans and air handling units is mainly manufactured at the Rosenberg Group's own production sites. From technical advice via assembly to delivery of air handling units that are wired ready for connection, the customer receives **all services first-hand from the Rosenberg Group.**

Our energy-saving EC motors are developed and manufactured exclusively on our modern production line at our Künzelsau headquarters.

By a combination of know-how and innovative production technology we achieve a quality that can cope with the highest demands.

With the introduction of **Ecodesign Directive 2009/125/EC (ErP)**, compliance with minimum energy efficiency requirements for Energy-using Products is required.

Rosenberg fans with EC motors currently already fulfil 100% of the limit values valid from 2013.

Complete solutions at first hand

We combine many years of experience, innovative development and state-of-the-art production techniques.

Leading the way!

Energy efficient EC technology

As a forward-thinking company, we identified a long time ago that a sensible processing of energy is of crucial **ecological and economic significance** – particularly with regard to CO₂ emissions and rising energy prices.

Therefore our engineers and technicians are constantly working to improve the energy efficiency of our products – and with success: Our motors with modern EC technology are more than 90% efficient and **save up to 50% in energy** as opposed to conventional motor technology. The low energy consumption not only contributes towards protecting the environment but at the same time also reduces our customers' operating costs.

EC technology is much more than an "energy efficient wonder". EC motors are maintenance free and silent. The **integrated, intelligent controller** allows a continuous control and further additional functions like pressure, volume flow, or air quality control. Our EC products **fulfil the strictest requirements** when it comes to energy efficiency, cost effectiveness and high air quality.

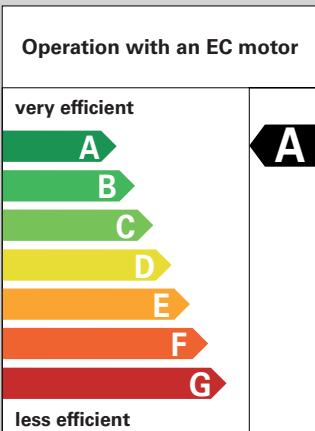

Advantages of EC technology

- very high degree of efficiency
- integrated controller (continuous control)
- very simple connection
- additional functions (pressure control, etc.)
- smaller-sized motor for the same level of performance
- less power consumption

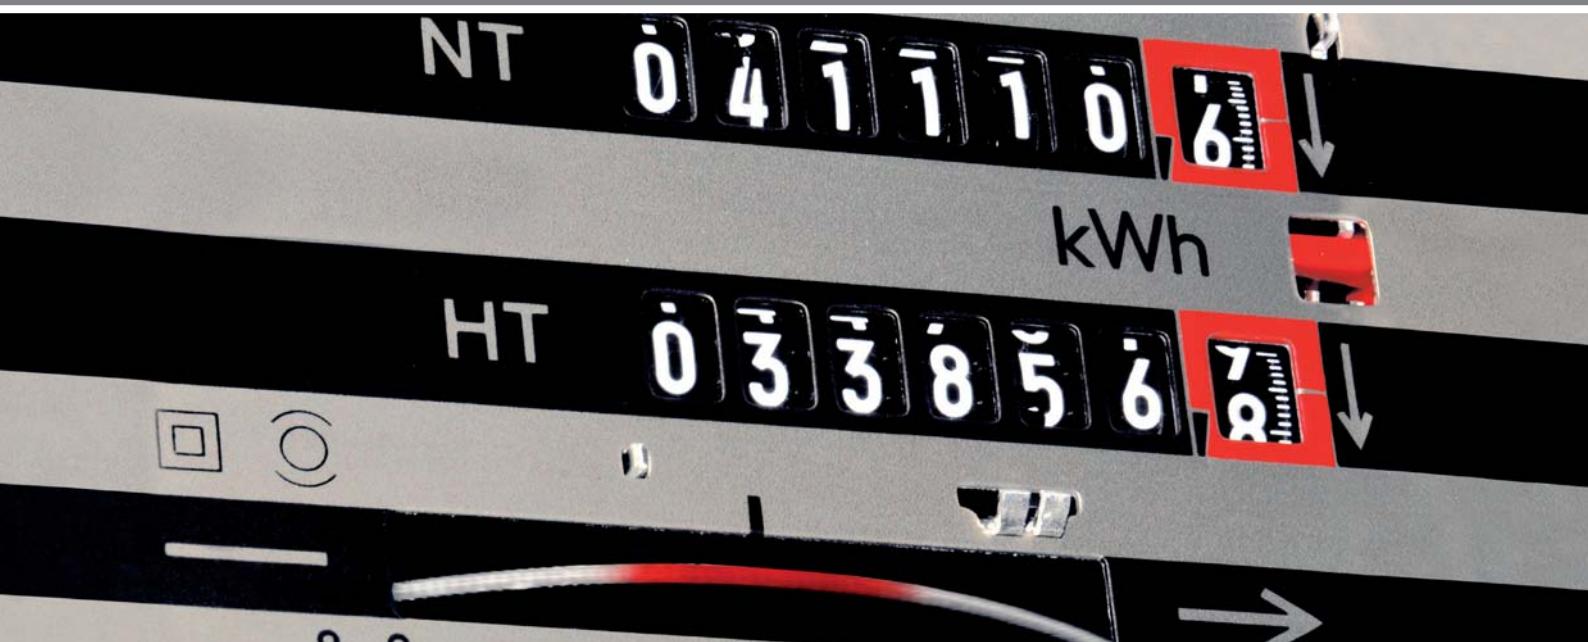

Fascinatingly efficient

EC technology preserves the environment and reduces costs at the same time.

Functional Principle

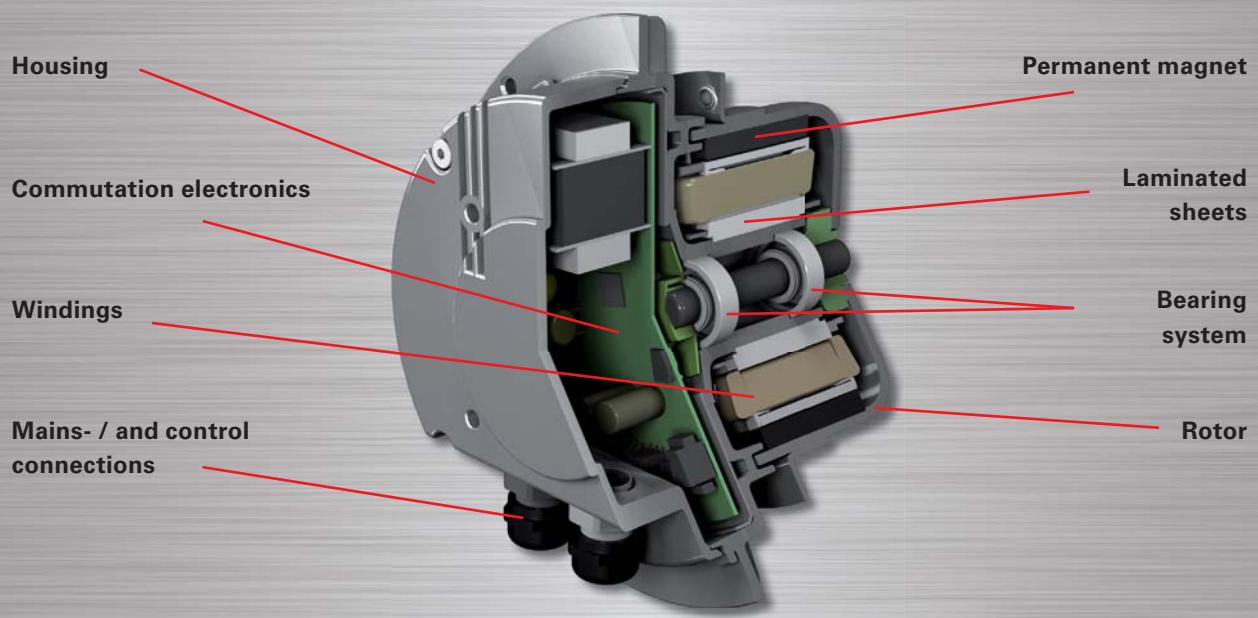

Energy efficient EC motor technology

A **Rosenberg EC motor** (EC = electronically commutated) is a brushless, direct current, external rotor type of motor.

In commutation electronics, an AC voltage is changed into a direct voltage by a commutator. The motor position is dependent upon voltage supplied via an inverter module (similar to the principle of a frequency inverter). The EC commutation electronics are different from a frequency inverter in that they decide how the motor phases in the stator are supplied with current (commutation) depending on position, rotation direction and default. Permanent magnets in the rotor produce a magnetic field which is required for full load production. A high efficiency, low noise, and continuous motor speed control is possible with this. An assembly flange on the rotor is used for impeller assembly.

Depending on the motor type, a terminal box is available with cable screw connections or connection cable for easy and quick connection.

Depending on the application area is possible to adopt further control functions (e.g. constant pressure control, volume flow control, temperature control).

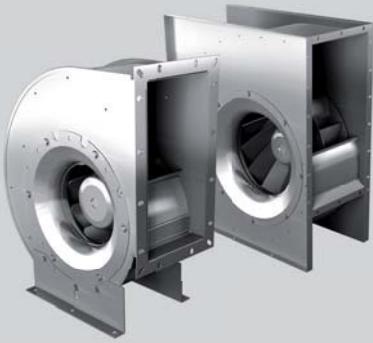

Conventional DC motors have a housing which contains all the assembly groups like carbon brushes, the collector, bearing, armature with winding , etc. They are arranged one after another. With the EC motor assembly, more space is saved and a collector and carbon brush are not necessary. Therefore the motor is significantly shorter and consequently has advantages with regard to dimensions when installing and quiet operation.

The slightly higher investment costs for EC fans in comparison with conventional motors are mostly amortized within the shortest operation time because of the low energy consumption and lower installation costs (no transformer control, frequency inverter, or phased angle control is necessary). Examples of potential savings can be found on pages 16/17.

EC Centrifugal fans

with backward curved impellers

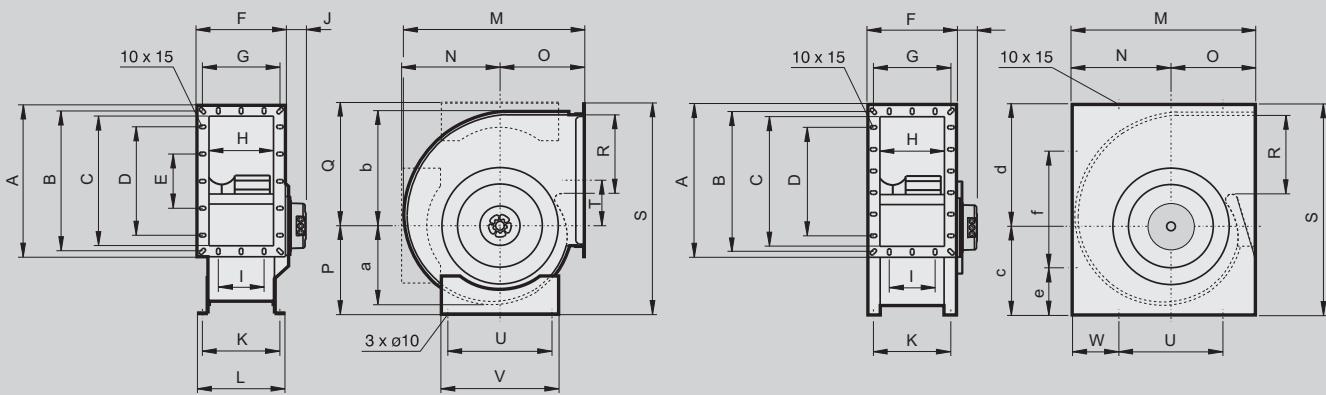

Features and Designs

High-efficiency centrifugal fans with backwards curved impellers were designed especially for application in modern ventilation and air conditioning units, and are suitable for carrying air that does not contain too much dust and less aggressive gases and vapours.

The sizes correspond to the standard R20 range as per DIN323. The size description corresponds to the impeller diameter. Housings are made of galvanised steel sheet metal with the housing's side parts connected to the spiral baffle plate via a standing seam. There are drilling holes in the side parts to fix the feet which can be changed around by 90°. From size 450 onwards, rectangular housings are supplied. Integrated motor protection is indicated by an alarm relay, so no separate motor protection device is needed. In the "Control Operation" (Standard) design, the motor speed is provided continuously via a 0-10V signal or a potentiometer (accessories).

EC Duct fans

with backward curved impellers, swing-out

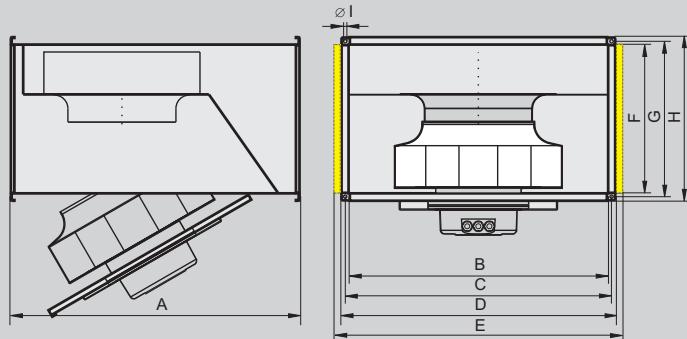

Features and Designs

Rosenberg duct fans combine the advantages of axial fans – straight flow and easy assembly – with high pressure stability, low noise levels, and the sophisticated efficiency of centrifugal fans.

The size description corresponds to the impeller diameter. Housings are made of galvanized steel sheet metal in the shape of rectangular ducts for direct installation into an air duct in every position. Complete motor wheel units swing out for cleaning purposes. The sound-attenuated range (WS) provides extremely low noise values with a space-saving, sound-absorbing punched plate coating at concise points. Integrated motor protection is indicated via an alarm relay. In the "Control Operation" (Standard) model, motor speed is continuously provided by a 0-10V signal or a potentiometer (accessories).

EC Roof fans

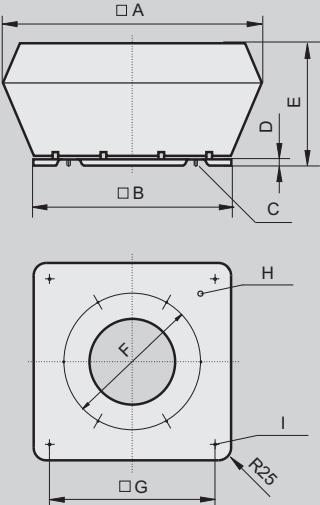

with backward curved impellers

Features and Designs

Sizes 310-450 have a weather proof plastic impeller made of PA6 (polyamide) and sizes 500-630 have an impeller made of sea water proof aluminium. Maintenance-free ball bearings enclosed on both sides with a long-term lubricant provide a long service life. Base frames with threaded bolts for tightening of suction side accessories and retracted injection nozzle made of galvanized sheet metal steel. Rain protective hood and square housing made of sea water proof aluminium. Motor cage with integrated shock-protection made of plastic coated round bar steel. Electrical connection is at the pre-assembled device's switch depending upon the design single-phase or three-phase. Integrated motor protection is indicated via an alarm relay so no separate motor protection device is needed. In the "Control Operation" (Standard) model motor speed is continuously provided by a 0-10V signal or a potentiometer (accessories). In the "Regulation Operating" (Standard) model, the pressure setpoint is continuously provided via a potentiometer provided for terminal box assembly, a potentiometer (accessories), or a 0-10V signal. The pre-assembled pressure sensor has a display with an adjustable pressure measurement range of (100Pa, 300Pa, 500Pa, 1000Pa).

EC Unoboxes

with backward curved impellers

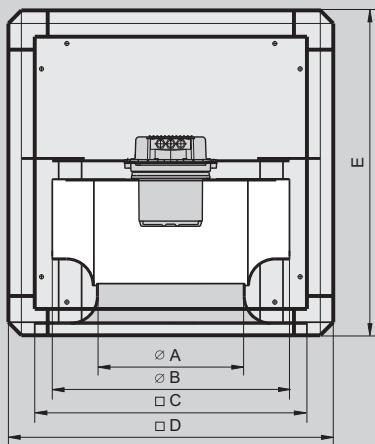

Features and Designs

Rosenberg Unoboxes are designed for carrying small to medium-sized volume flows. Typical areas of application are, e.g. ventilation of apartments, shopping malls, supermarkets, workshops and garages.

The housing consists of a frame made of extruded aluminium profile with 2 chambers and plastic edges as well as double-skinned, 20mm thick panels made of galvanized steel sheet metal with insulation made up of non-combustible, sound- and heat-insulated glass wool mats. One housing wall is left open. Fans up to a nominal size of 450 are fitted with backwards-curved plastic blades and a support plate made of steel sheet metal. From size 500 onwards, the high-efficiency impellers are made of aluminium. Integrated motor protection is indicated via an alarm relay. In the model "Control Operation" (Standard), the motor speed is continuously provided via a 0-10V signal or a potentiometer (accessories).

all dimensions in mm / Changes and errors excepted!

Air volume performance curves:

- integrated control (EC Control)
- complete system with reduced operating costs due to use of EC technology
- continuous control
- exhaust possible in all directions
- extremely low noise levels

Sustainable efficiency

Examples of potential energy-saving

Potential saving of an EC Centrifugal fan (size 560)

Operating point:	short term 100%	day operation 80%	night operation 60%	
Volume flow	8.000 m³/h	6.400 m³/h	4.800 m³/h	
Static pressure	500 Pa	320 Pa	180 Pa	
Power EC¹	2.023 W	1.063 W	478 W	
Power AC²	2.622 W	1.789 W	1.069 W	
Running time per day	2 hours	10 hours	12 hours	
Energy consumption per year				Sum
Power consumption EC¹	1.473 kWh/a	3.869 kWh/a	2.090 kWh/a	7.431 kWh/a
Power consumption AC²	1.910 kWh/a	6.512 kWh/a	4.670 kWh/a	13.091 kWh/a
Power saving	437 kWh/a	2.643 kWh/a	2.580 kWh/a	5.660 kWh/a
Saving in %	22,9 %	40,6 %	55,2 %	43,2 %
Cost saving per year:³				1.132 EUR
Emission reductions per year:⁴				3,06 t CO₂

1) Type: EHAG 560.6IF 2) comparable AC fan 3) Electricity costs per kWh: 0,20 EUR 4) Source: www.compense.de

Potential saving of an EC Duct fan (size 400)

Operating point:	short term 100%	day operation 80%	night operation 60%	
Volume flow	2.500 m³/h	2.000 m³/h	1.500 m³/h	
Static pressure	250 Pa	160 Pa	90 Pa	
Power EC¹	358 W	200 W	98 W	
Power AC²	472 W	353 W	238 W	
Running time per day	2 hours	10 hours	12 hours	
Energy consumption per year				Sum
Power consumption EC¹	261 kWh/a	728 kWh/a	428 kWh/a	1.417 kWh/a
Power consumption AC²	344 kWh/a	1.285 kWh/a	1.040 kWh/a	2.668 kWh/a
Power saving	83 kWh/a	557 kWh/a	612 kWh/a	1.251 kWh/a
Saving in %	24,2 %	43,3 %	58,8 %	46,9 %
Cost saving per year:³				251 EUR
Emission reductions per year:⁴				0,67 t CO₂

1) Type: KHAG 400.5FA 2) comparable AC fan 3) Electricity costs per kWh: 0,20 EUR 4) Source: www.compense.de

Potential saving of an EC Roof fan (size 450)

Operating point:	short term 100%	day operation 80%	night operation 60%	
Volume flow	4.000 m³/h	3.200 m³/h	2.400 m³/h	
Static pressure	360 Pa	230 Pa	130 Pa	
Power EC¹	736 W	392 W	183 W	
Power AC²	927 W	667 W	422 W	
Running time per day	2 hours	10 hours	12 hours	
Energy consumption per year				Sum
Power consumption EC¹	536 kWh/a	1.428 kWh/a	801 kWh/a	2.765 kWh/a
Power consumption AC²	675 kWh/a	2.426 kWh/a	1.843 kWh/a	4.944 kWh/a
Power saving	139 kWh/a	998 kWh/a	1.042 kWh/a	2.179 kWh/a
Saving in %	20,6 %	41,2 %	56,5 %	44,1 %
Cost saving per year:³				436 EUR
Emission reductions per year:⁴				1,18 t CO₂

1) Type: DVW 450-G.5FA 2) comparable AC fan 3) Electricity costs per kWh: 0,20 EUR 4) Source: www.compense.de

Potential saving of an EC Unobox (size 450)

Operating point:	short term 100%	day operation 80%	night operation 60%	
Volume flow	3.600 m³/h	2.880 m³/h	2.160 m³/h	
Static pressure	280 Pa	180 Pa	100 Pa	
Power EC¹	504 W	273 W	134 W	
Power AC²	663 W	456 W	279 W	
Running time per day	2 hours	10 hours	12 hours	
Energy consumption per year				Sum
Power consumption EC¹	367 kWh/a	994 kWh/a	585 kWh/a	1.946 kWh/a
Power consumption AC²	483 kWh/a	1.660 kWh/a	1.219 kWh/a	3.361 kWh/a
Power saving	116 kWh/a	666 kWh/a	633 kWh/a	1.415 kWh/a
Saving in %	24,0 %	40,1 %	52,0 %	42,1 %
Cost saving per year:³				283 EUR
Emission reductions per year:⁴				0,77 t CO₂

Total overview of our EC product range

Fans and AHU's with energy efficient EC drives

For ventilation of residential, office and industrial buildings: For every application area we offer suitable EC solutions.

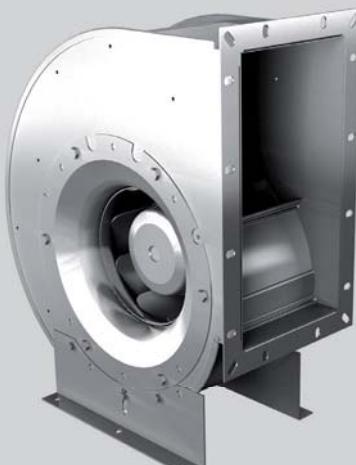

- **Centrifugal fans** with backwards curved impellers
- **Axial fans for cooling**
- **Duct fans** with backwards curved impellers in swing-out and sound-attenuated designs
- **Roof fans** vertical blowing
- **Unobox** sound attenuated exhaust boxes
- **Air curtains**
- **Air Handling Units**
- **Compact Air Handling Unit with heat recovery (SupraBox)**

EC Duct fan (swing-out)
for installation in duct systems, i.e.
ventilation of commercial and industrial
buildings

SupraBox Comfort
Heat recovery system for comfort
ventilation in offices and commercial
buildings

EC Centrifugal fan
for installation in duct systems, i.e.
ventilation of commercial and industrial
buildings

EC Air curtains
for industrial and commercial buildings

EC Unobox
for ventilation of residential,
commercial and industrial buildings

EC Roof fan
for central air extraction of resi-
dential, commercial and industrial
buildings

Axial fan for cooling (EC)
for use in cooling technology
(condenser, evaporators)

Free running impeller (EC)
for use in AHU's and clean room
technology
